

# Risk-stratum reclassification: SAFEHEART → CALON-FH

Cells show the percentage of each SAFEHEART-RE stratum that CALON-FH places in each output stratum

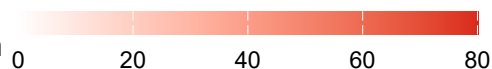

SAFEHEART-RE stratum (refit on same training cohort)

Events (n=165): how CALON reclassifies from SAFEHEART strata

Non-events (n=3,375): how CALON reclassifies from SAFEHEART strata

% of stratum

Strata: Low <5%, Moderate 5–20%, High ≥20% predicted ASCVD probability. NRI total +0.246 (event +0.127, non-event +0.119).
