

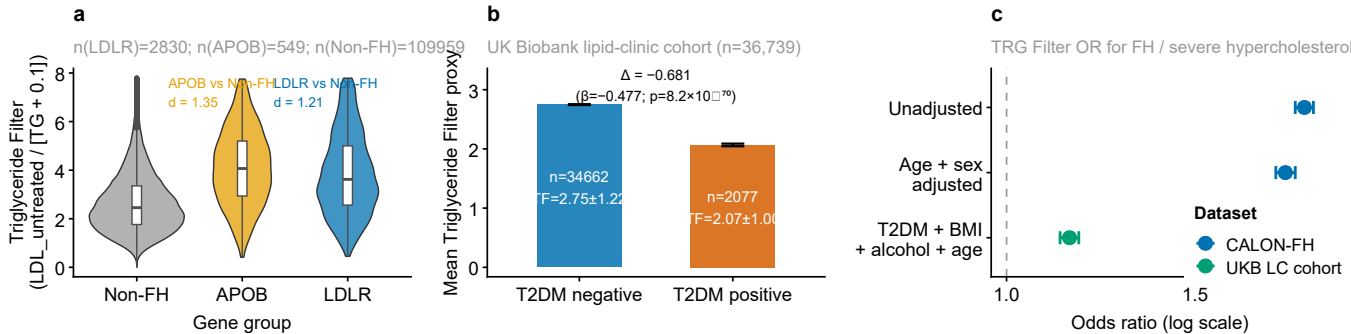

Figure 2 | Triglyceride Shield validation.

a, Distribution of Triglyceride Filter ($\text{TF} = \text{LDL_untreated} / (\text{TG} + 0.1)$) by causal gene group (Cohen's d: LDLR=1.21; APOB=1.35).

b, TF is significantly attenuated in T2DM ($\beta = -0.477$; $p = 8.2 \times 10^{-70}$), confirming T2DM as a critical confounder.

c, TRG Filter odds ratio for FH across adjustment models. Effect persists after full confounder adjustment.

TF, Triglyceride Filter; T2DM, type 2 diabetes mellitus; LC, lipid clinic; OR, odds ratio.
